

# Patient Admission Guidelines

## Types of Admission

- Elective Admission: scheduled in advance for planned procedures or treatment, arranged through the outpatient clinic.
- Emergency Admission: initiated from the ED for patients who need inpatient care (see [emergency\\_procedures.pdf](#)).
- Direct Admission: a patient is admitted on a physician's order without going through the ED, usually for a known condition requiring monitoring.

## Admission Requirements

- A valid CNIC or other government ID is required for registration.
- An admitting physician's order, including provisional diagnosis and requested ward/bed type, must be on file.
- Insurance or payment method is verified by the billing office before or shortly after admission (see [billing\\_information.pdf](#)).
- A signed general consent for treatment is obtained from the patient or their legal guardian.

## Bed Allocation

- Bed allocation is coordinated by the Bed Management Office based on clinical need, ward specialty, and isolation requirements.
- Patients requiring isolation (e.g., infectious disease) are prioritized for single rooms where available.

## Admission Documentation Checklist

- Complete nursing admission assessment within 2 hours of arrival on the ward.
- Physician's admission note documented within 24 hours.
- Allergy status confirmed and allergy wristband applied.
- Initial care plan and expected length of stay documented.
