

Patient Registration Process

New Patient Registration

- New patients provide full name, date of birth, CNIC/passport number, contact details, and next of kin information.
- The registration system generates a unique Medical Record Number (MRN) used across all hospital departments.
- A photo may be taken at registration for identity verification, consistent with hospital privacy policy.

Returning Patient Registration

- Returning patients are located in the system by MRN, CNIC, or name plus date of birth.
- Any changes to contact information, insurance, or next of kin are updated at each visit.

Registration Channels

- Walk-in registration desks in the main lobby and outpatient clinics.
- Online pre-registration through the hospital website for scheduled appointments.
- Phone registration for patients arranging admission in advance.

Data Privacy at Registration

- All personal and medical information collected at registration is protected under the hospital's privacy and data protection policy.
- Staff may only access patient records relevant to the patient's current care (minimum necessary access principle).
